Justin Richards

Atlanta, Georgia, United States

Experienced full stack developer with over 10 years in the industry. Primary focus on Javascript stack with React and Node. Overall, I love problem solving and learning new things, especially when it relates to providing an amazing customer experience.

Tech Soup:
Frontend: ES6/7, React, Angular, Sass/CSS/BEM
Backend: Node/Php, Serverless/Lamba AWS, Graphql
Databases: Mongo, Rethink, Mysql

Fun facts:
Built a cryptocurrency trading bot in node/react/lambda
#1 on Product Hunt for tenrocket.com
Avid mentor on codementor.io

Recent Experience

- **Senior Full Stack Engineer** Itential *Mar 2018 - Feb 2020*
  Itential is a network automation tool for large service providers. As part of the core application team, I built out several new services and applications, largely in react, node and mongo. Projects included: an Internal Search API for applications, an API for building and managing textfsm templates, a product tagging system UI and API, and a React UI component library.

- **Full Stack Engineer** Tenrocket.com *Oct 2014 - Oct 2017*
  Tenrocket.com focused on building minimum viable products (MVPs) for startups. My roles included building out the products (react/node/graphql), growing a team of engineers, overseeing technical direction on over 50 products built by tenrocket. Based on these efforts, we were voted #1 on Product Hunt.

- **Front End Developer** NBA.com *Jul 2012 - Jul 2014*
  I helped construct and guide the front end development of the new nba.com in 2012. The front end was based in html5, css, vanilla javascript and the backend was java freemarker and couchdb. I designed and built architecture to provide more centralized and reusable code base. I built theming architecture in order to spin up new site sections up easily.
